

# A Quantitative Approach to Environmental Justice in Italy. The Case of 'Napoli Orientale - SIN'

Giorgia Scognamiglio

[giorgia.scognamiglio@uniroma1.it](mailto:giorgia.scognamiglio@uniroma1.it)

# Who I am

- PhD Economic Geography (38th cycle)
- Main research interests:  
*environmental justice, socio-spatial inequalities, local development*
- Member of Memotef research group on EJ. Congress "Giustizia ambientale in Italia" April 4, 2023, at the Italian Geographic Society (Rome)

# Shared glossary

- **Environmental justice:**

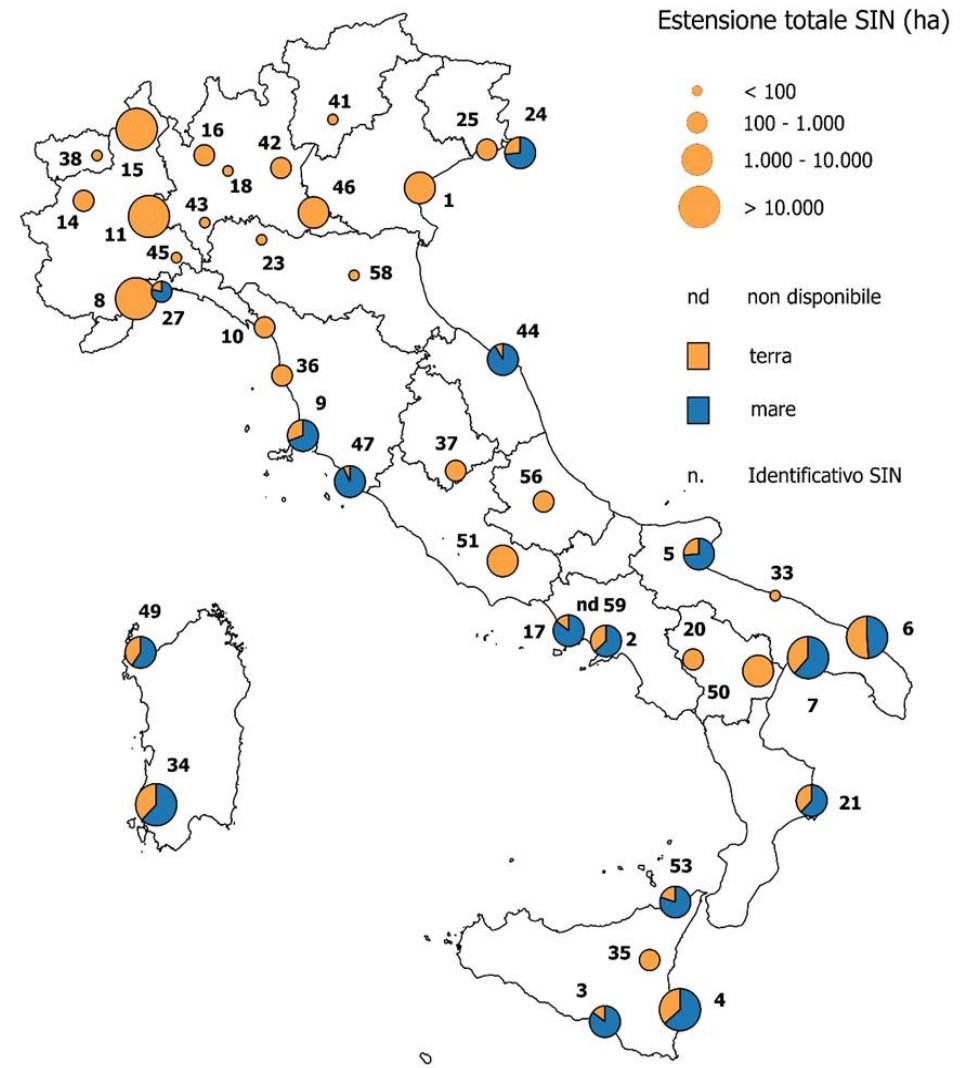

equal **distribution** of environmental burdens and benefits and **equal access** to the decision-making process to have a healthy environment in which to **live, learn, and work**

# Shared glossary

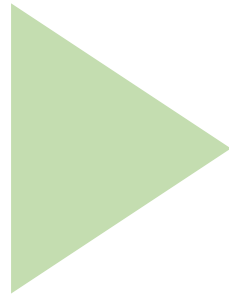

- **Sites of National Interest (SIN):**

contaminated areas defined by specific legal provisions on the basis of quantity and **hazardousness** of pollutants, extent of environmental **impact** in terms of health and ecological **risk**, and **damage** to cultural and environmental heritage

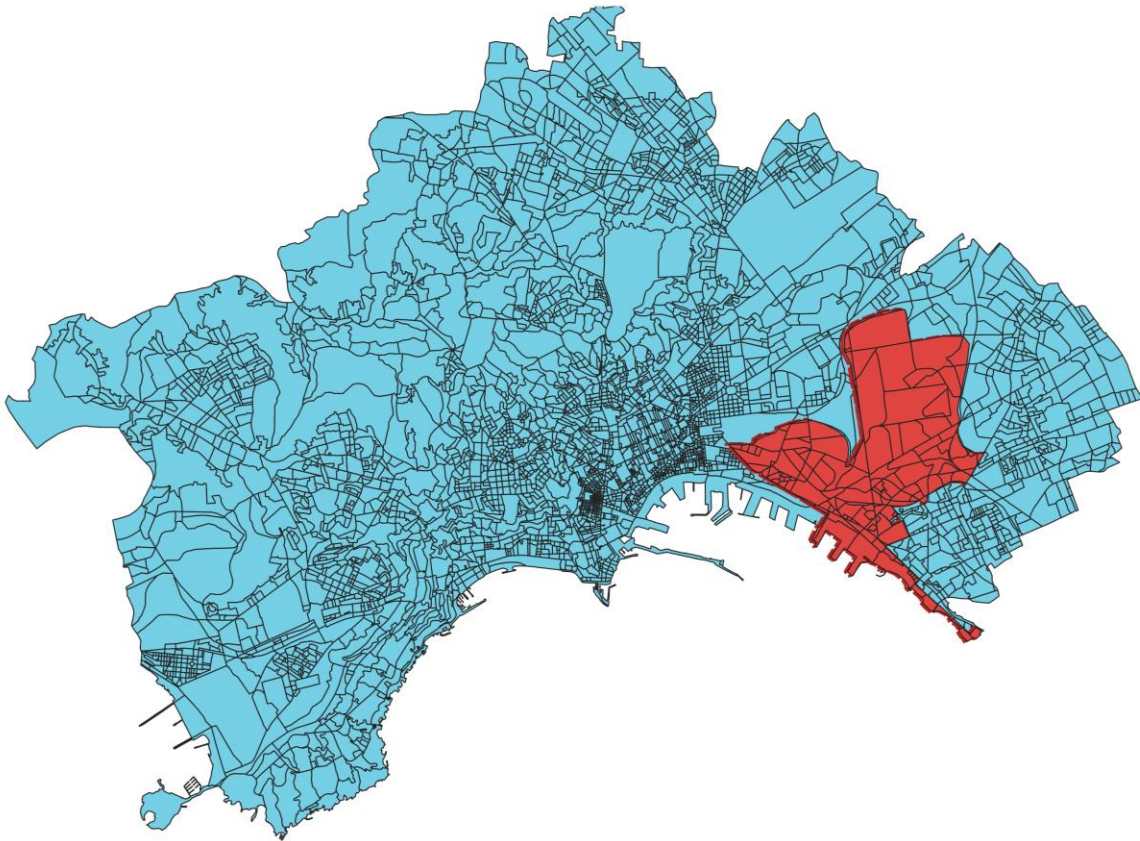

# Aim

Exploring the socioeconomic profiles of communities residing within the 'Napoli Orientale - SIN'

Examine whether **environmental disadvantage** resulting from residence within the SIN is accompanied by **socioeconomic disadvantage**

# Case-study: 'Napoli Orientale - SIN'

Indicator calculation from 'Census of Population and Housing' variables for census sections in Naples municipality

Intersection between perimeter of the SIN and census sections (*host area*)

Intersection between the perimeter of the area that falls outside the SIN and the census sections (*non-host area*)

Comparison of indicators between the SIN *host area* and the *non-host area* (*SPATIAL COINCIDENCE*)

Mann-Whitney U-test

Density distribution (*kernel*) analysis

Logit Regression Analysis

# Method

# Method

Foreign resident  
incidence

Total and Female  
unemployment rate

Inactivity rate

Incidence of  
Homemakers in the  
non-labor force (NFL)

Incidence of  
population 15 years  
of age and older with  
education at or below  
middle school level

Incidence of renter  
households

Incidence of large  
households (more  
than 5 members)

Average area of  
housing occupied by  
at least one resident

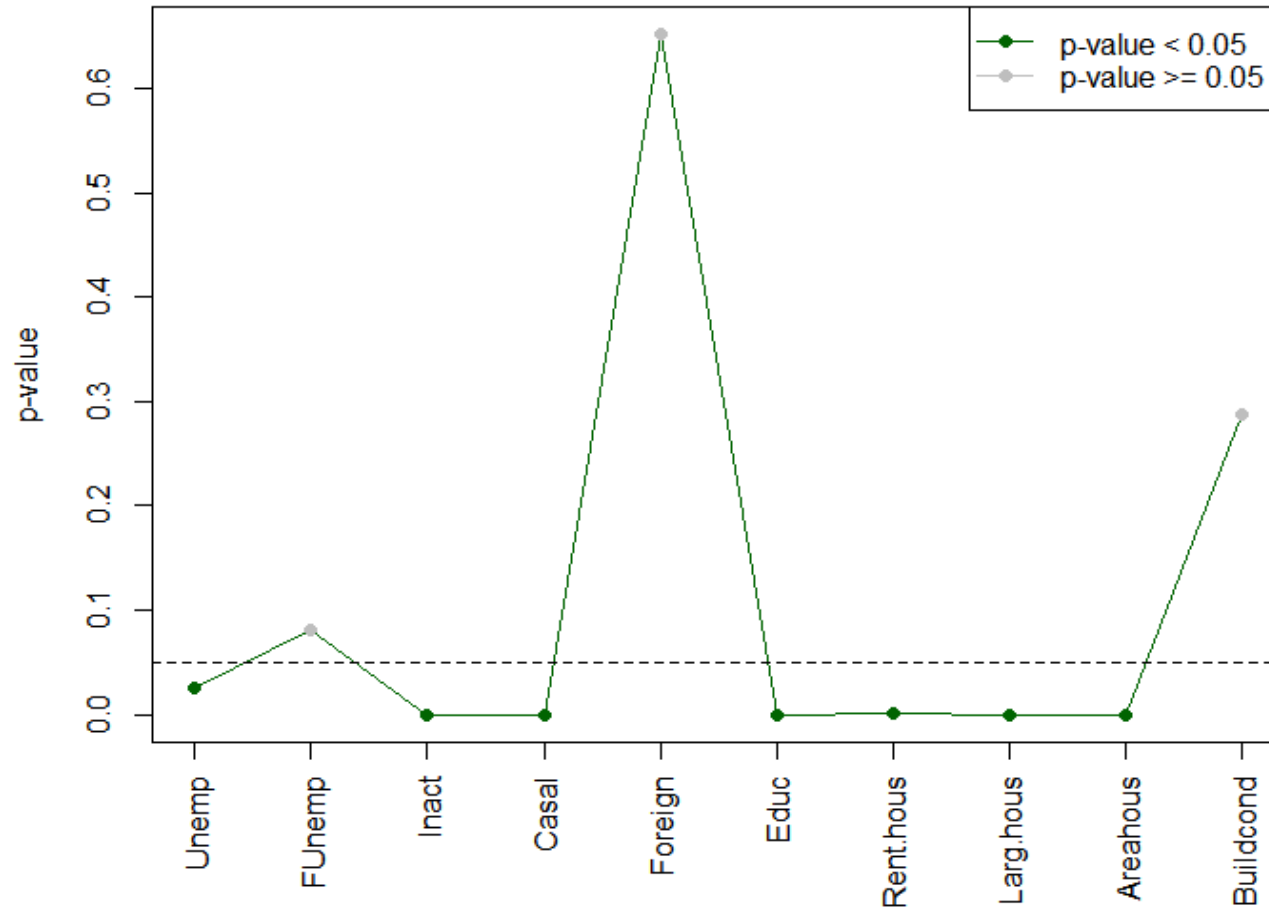

Concentration of  
residential buildings  
in mediocre and poor  
condition

# Indicators

# Results: Mann-Whitney U-test

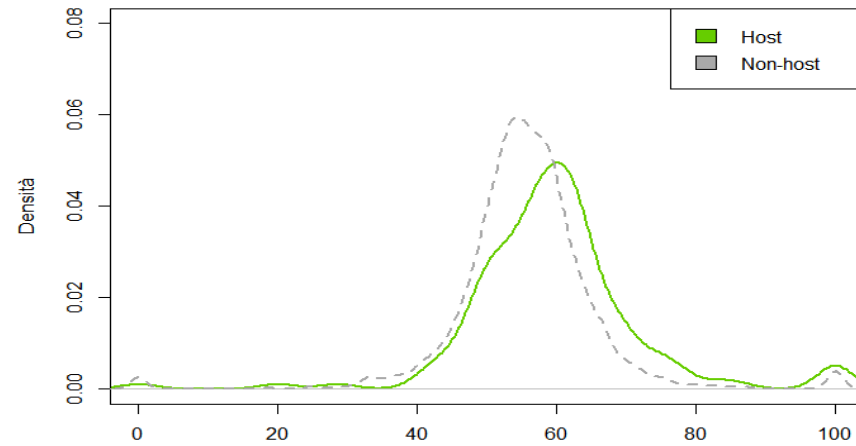

Mann-Whitney U Test - p-values

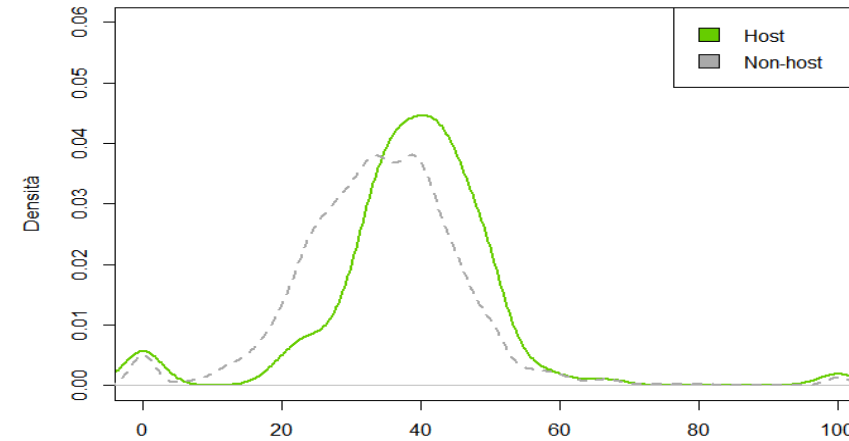

For 7/10 variables there is a significant difference between host and non-host areas

# Results: Density distribution (kernel)

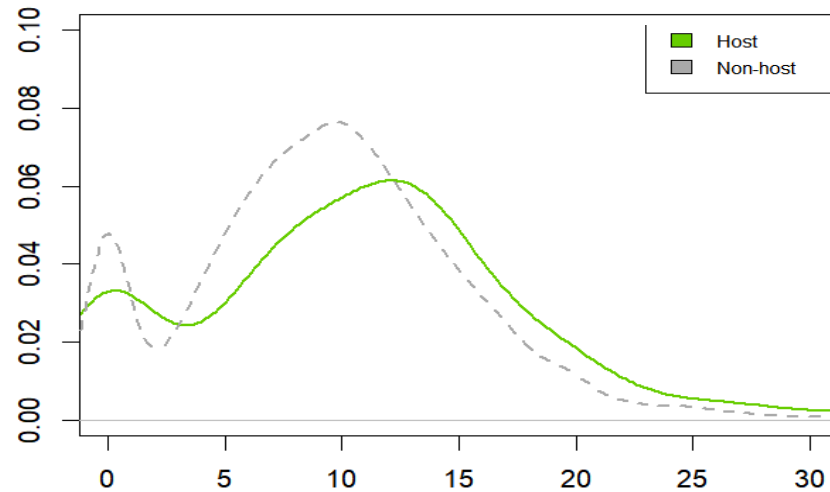

**Inactivity rate**

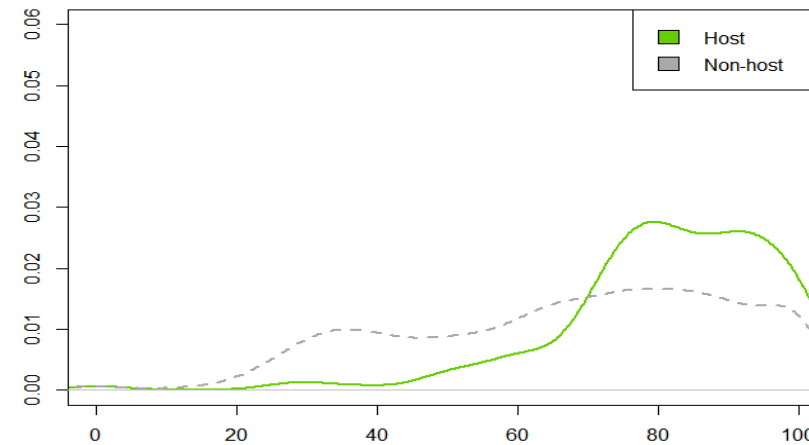

**Incidence of Homemakers in the non-labor force**

**Unemployment rate**

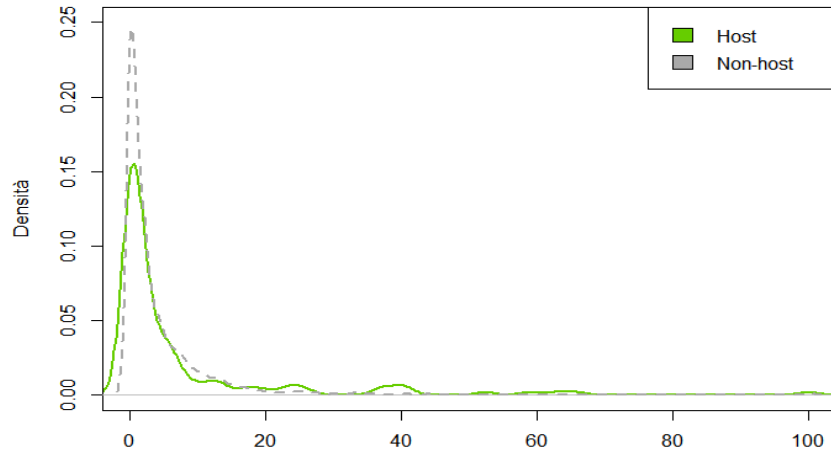

**Incidence of population 15 years of age and older with education at or below middle school level**

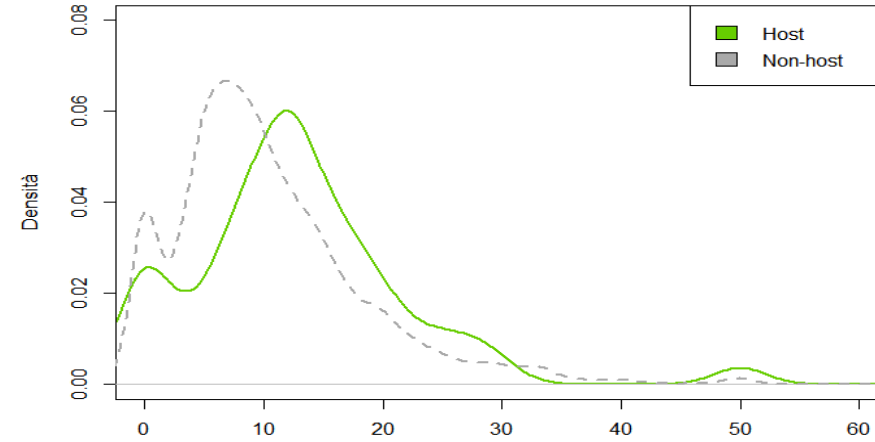

# Results: Density distribution (kernel)

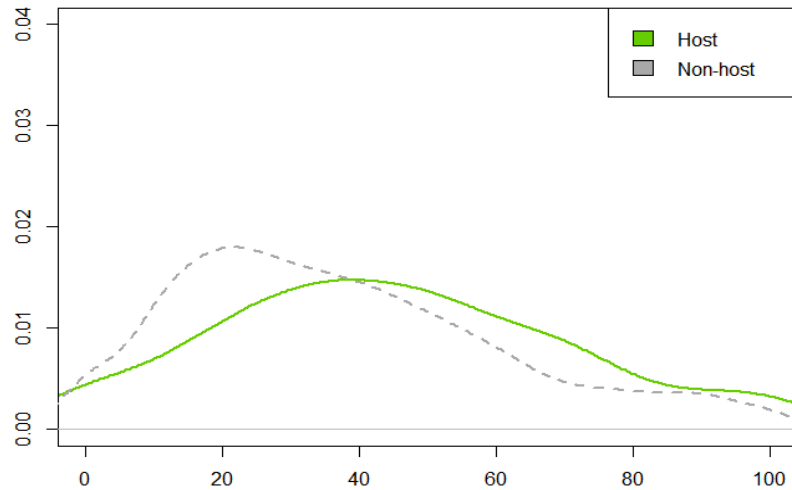

Foreign resident incidence

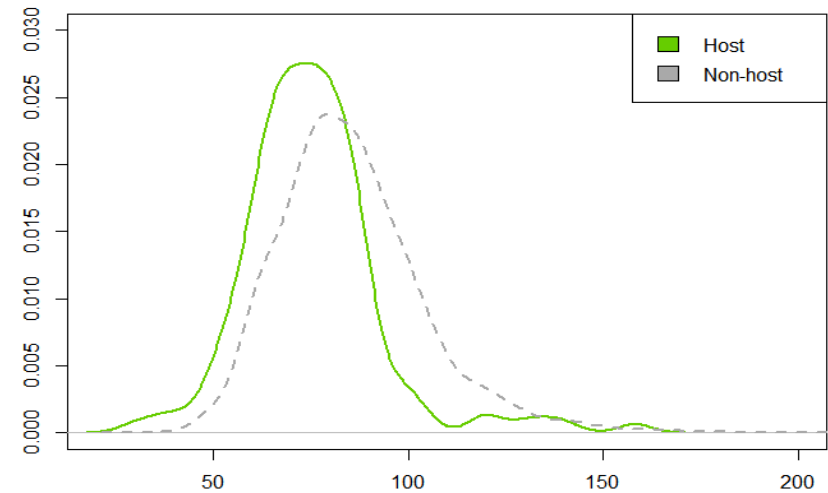

Incidence of large households

Incidence of renter households

Average area of housing occupied by at least one resident

# Results: Logit Regression Analysis

$$\log\left(\frac{p}{1-p}\right) = \beta_0 + \beta_1 \text{Unemployed} + \beta_2 \text{Inactivity} + \beta_3 \text{Homemakers} + \beta_4 \text{Foreign} \\ + \beta_5 \text{Education} + \beta_6 \text{RenterHouseholds} + \beta_7 \text{AvgAreaHousing}$$

Variable	Estimate	Std. Error	z value	Pr(> z )	
(Intercept)	-6.002128	1.026879	-5.845	5.06E-09	***
Unemployment	0.02012	1.15E-02	1.756	0.07914	.
Inactivity	<b>0.034438</b>	1.13E-02	3.058	0.00223	**
Homemakers	0.017699	0.008443	2.096	0.03605	*
Foreign	<b>0.022188</b>	7.69E-03	2.886	0.00391	**
Education	<b>0.019058</b>	0.006994	2.725	0.00643	**
Renter households	-0.004547	4.14E-03	-1.099	0.27196	
Avg area of housing	<b>-0.017826</b>	6.76E-03	-2.638	0.00835	**

Signif. codes: 0 '\*\*\*' 0.001 '\*\*' 0.01 '\*' 0.05 '.' 0.1 ' ' 1

Null deviance: 1210.4  
Residual deviance: 1122.2  
AIC: 1138.2

## Odds ratio from Logistic Regression Model

Variable	Odd Ratio	Change in Probability (%) Y=1
Unemployment	1.020324027	<b>+2,03%</b>
Inactivity	1.035038022	<b>+3,5%</b>
Homemakers	1.017856732	<b>+1,8%</b>
Foreign	1.022435494	<b>+2,24%</b>
Education	1.019241071	<b>+1,92%</b>
Renter households	0.995463319	-
Avg area of housing	0.982332091	-

# Results: summing up

- Initial results of the analysis suggest the existence of **environmental (in)justice**: the community residing in the 'Napoli Orientale - SIN' has a socioeconomic disadvantage that adds to environmental one
- Please note: the results are preliminary; they do not attempt to be generalizable nor make any assumption of causality, but do reveal a disadvantage that constitutes additional **vulnerability** of the population residing in the SIN
- Data used are old, updating the analysis to the newest variables as of 2021 and time series analysis may reveal interesting new aspects

XIII MEMOTEF RESEARCH DAY

June 28, 2023

Thank you  
for your  
attention
