Multistate models for the dummies: IMaCh software and backward projections

Nicolas Brouard
Institut National d'Etudes Démographiques - INED

There are few software packages available to compute health expectancy based on a multistate life table method using longitudinal survey data. IMaCh (Maximum Likelihood Computer Program using Interpolation of Markov Chains) is an open source software which has been developed by Prof. Nicolas Brouard and his colleagues at INED, France.

Latest version of the software is available at the website http://euroreves.ined.fr/imach/.
Latest publication concerning IMaCh is https://doi.org/10.1016/bs.host.2018.11.009 and will be provided
